

Proof of review Carbon footprint Eurofins Scientific SE FY2021

2022/06/15

The methodology, data accuracy, consistency, and emission factors of Eurofins Scientific's carbon footprint for the reporting year FY2021 were verified and validated by CO2logic, an external carbon footprint consultancy company. CO2logic validated the methodology according to the **GHG Protocol**. In this process the following parameters and topics were checked:

- Description of company boundary and inventory boundary (organizational boundary, operational boundary, consolidation approach, reporting period)
- Information on the covered emissions (correct reporting per scope and per category within each scope, full coverage of all six Kyoto Greenhouse Gases)
- Data management and treatment system in place and used methodology documented in a separate document
- Methodology in place for outlier validation and treatment
- Methodology in place for data gaps
- Use of emission factors which are relevant for the emission source and the reporting period
