

OUR COMMITMENT TO ENVIRONMENTAL SUSTAINABILITY

Air conditioners are vital to the lives of many people around the world, but they consume large amounts of energy during operation, and fluorocarbons used as refrigerants significantly influence climate change.

We at UESL ensure that we are well aware of the impacts of our work and that's why we choose to only work with the best brands of air conditioners in the world.

UESL is among the first HVAC companies to be certified by the Energy Regulatory Commission (ERC) to import HVAC products that are 'environment-conscious', using inverter technologies and low impact refrigerants.

For more information on your installed products' environmental impact, please get in touch with your dedicated relationship manager.
