

To leave work in good health

To improve our working conditions

Improve our environmental footprint

Meet our HSE requirements and commitments

To achieve the required level of excellence, we have to be exemplary, vigilant and active every day on the ground and in our PSMs.

Our structural LISI E-HSE program is the motor behind our management system. It is based on twelve axes of continuous improvement, including the following fundamentals:

**Assess and
control our
risks**

**Promote safer and
more environmentally
friendly behaviors**

**Have
common
HSE rules**

Every employee and every partner must be aware that health and safety at work and the environment count among our values and are priorities for us. Their consultation and participation are the keys to success.

We undertake to put in the effort and resources needed to ensure LISI is excellent in this field.

To leave work in good health

TF1
under
7

TF1 : Number of accidents with and without day lost of LISI employees and temporary workers per 1 million working hours

100% of the staff has undergone safety training/awareness

To improve our environmental footprint

1% energy savings due to projects vs N-1 consumption

0,4% minimum of renewable energy produced on site

100% of identified sites in water stressed areas have implemented a water consumption control plan

Meet our HSE requirements and commitments

Maintain **ISO 14001** and **ISO 45001** certifications

Ensure the **sustainability** of our **production sites**
